ULTRA BRUTAL LAYOUT ENGINE BREAKER v2.0

SECTION 1: VARIABLE CANVAS GEOMETRY (The Page Dimension Trap)

Welcome to the layout engine stress test. This first section forces mid-document dimension recalculations. The current page is standard Portrait layout (8.5" x 11").
Direction: ↓

=== [CRITICAL TEST: LANDSCAPE CANVAS - 11" x 8.5"] ===
If your layout engine fails to dynamically recalculate canvas dimensions mid-stream, the horizontal path below will clip horizontally or render onto a clipped portrait canvas.

◄── HORIZONTAL EXPANSION PATH ALPHA ──► [Wide Node 1] ◄──► [Wide Node 2] ◄──► [Wide Node 3]

=== [CRITICAL TEST: RETURN TO PORTRAIT - 8.5" x 11"] ===
Returned to portrait constraints successfully. The document canvas width has shrunk back down.

SECTION 2: FLOATING Z-INDEX & ABSOLUTE OVERLAPS

In-browser rendering pipelines often struggle with absolute positioning anchors. Below we use extreme and negative indentation offsets to push text lines into layout boundaries.

[CRITICAL NEGATIVE BOUNDARY NODE] This line has a negative left indent of -0.5 inches. It should spill into the left margin space.

[EXTREME RIGHT SHIFTED ANCHOR NODE]

SECTION 3: PATHOLOGICAL TABLE SPANS & VERTICAL TEXT

This section tests cell bound calculations when horizontal spans (gridSpan), vertical spans (vMerge), and rotated text directions are combined.

<table>
<tr><td>Row 1, Cell 1
Base Node</td><td colspan="2">This cell spans across Columns 2 and 3 dynamically via gridSpan.</td></tr>
<tr><td rowspan="2">This cell is vertically merged across Row 2 and Row 3.</td><td>Row 2, Cell 2
Standard Node</td><td rowspan="2">VERT-TEXT ↑ VERTICAL ROTATIO N TEST btLr</td></tr>
<tr><td>Row 3, Cell 2
Deeply Nested Child</td></tr>
</table>

SECTION 4: BI-DIRECTIONAL (BIDI) LOGIC & RTL ARROWS

Testing script-direction switching. Mixed LTR and RTL scripts often corrupt arrow vectors.

Flow Path 1 (Standard LTR): **Input Gateway ⟶ Processing ⟶ Output**

Flow Path 2 (Mixed Bidi Stress): **Gateway ⟶ (בדיקת מערכת) ⟶ (معالجة البيانات) ⟶ Complete**

Flow Path 3 (Aggressive Edge Reverse): ⟵ (שגיאה) ⟵ **0x7F ERROR CRITICAL** ⟵ (فشل)

SECTION 5: INFINITE REFLOW & METRIC EDGE CASES

The table below sets a column width to exactly 1mm containing an un-spaced alphanumeric string to trigger infinite word-wrap recalculation errors.

SYSTEM_UPGRADE_INITIALIZATION_PHASE_MAX_STRESS_LOOP_TEST_BLOCK
